

ELBOW DEEP PUMPING TESTIMONIAL

Turn Table Reels Allow for Faster Relocation

With 3 years of pumping experience, Elbow Deep Pumping runs 2 lines with just 2 guys per line. In order to make this work, Carter Beller uses Puck equipment and the LightSpeed control system.

Running a consistent 2,300 gallons per minute, Elbow Deep uses a hose reel from Puck Enterprises to handle the 8" hose and Nebraska terrain. With 120 degrees of rotation and 2 miles worth of 8" hose capacity, Puck's Turn Table Reels have helped out with Beller's operation.

The TTR 20's capacity extends operation abilities and decreases required manpower while making the job easier and safer.

"The TTR's definitely made us more efficient. It's less hose carts you gotta drag around, less hooking up and unhooking."

The TTR 20 reduces equipment needed
