

REVOLUTION EQUIPMENT RENTAL

TESTIMONIAL

Custom Manufacturing for Innovative Solutions

In Texas, John Novotny operates Revolution Equipment Rental in the fuel and water management industry. Working with the engineers at Puck, the first twin engine, variable rpm, parallel centrifugal pump unit came into existence: the Scimitar.

As the first of its kind, the Scimitar was the type of pump unit that had not been attempted before, as it was considered too difficult. The Scimitar comes equipped with Puck's LightSpeed control system to wirelessly — and safely — control valves and gates from any connected device in real-time from anywhere.

"Being willing to take on a concept and help develop it for a customer has been an extreme example of how innovative Puck and the guys here are."

Puck turned Novotny's concept into reality
