

MIDWEST MANURE MANAGEMENT TESTIMONIAL

The Right Equipment & Knowledge Can Bring Success

Founded in 2008, Midwest Manure Management went from pumping 10 million gallons a year to almost 250 million a year with two systems. Part of that success is the reliability of the equipment they use.

Midwest Manure Management has almost all Puck equipment, from hose carts to pumps. LightSpeed makes it possible to do all this with a limited amount of help.

As they look into expanding to a third line, Moellers knows he can rely on Puck.

"We constantly try to change little pieces of the puzzle that we find that are weak and we can get more efficiency and speed out of it."

MMM increased gallons pumped 25x

Jeff Moellers has been pumping for 10+ years
